SL-K

Although cutting-edge technology is the key to crank design, FSA recognizes that color and graphics trends often influence consumer decisions. FSA has given its SL-K series a graphics update in a variety of colors.

GIMONDI

Named for Felice Gimondi, world champion and winner of every major cycling tour, this new crankset reflects the cherished history of FSA's cycling past, and marries it to the modern forging design of the present. The Gimondi crank set unites past and present in one unique and beautiful new product.

METROPOLIS

The Metropolis PT crankset is the first planetary gear crankset specifically designed for urban riding. The planetary gear system is driven by a unique and patent pending compound pawl system that allows seamless shifting under any load, with less stress on the gear mechanism than other systems, ensuring a long service life.

VISION

A new crank offering for the Vision range, the TriMax Pro expands the range of Tri/TT specific cranksets to include an economical level alloy aero crankset, available in BB30. The TriMax Pro TT crankset for mid-level triathlon bikes features forged arm design with compact bolt circle, and weighs only 863 grams.
